

Your brain commands

Type these into **your MyGentic brain**. Everyone starts with **“Hey Brain”**: your brain comes ready, with all five days' skills installed. It asks one question at a time: answer it, and it moves on. Stay in the same chat for each day's commands. No code, ever.

If it gives you a long answer instead of one question, say: “Hey Brain, one step at a time. Ask me one question, then wait.”

1

Day 1 · Your expertise is the asset

Find the one problem you've solved for 15+ years.

“Hey Brain, interview me about my expertise”

5–7 questions, one at a time: your years, the problems people bring you, who paid. You get a list of problems you've solved for years.

“Hey Brain, find my one problem”

Your top 3 scored on three tests: **15+ years** · **people paid** · **you can explain it**. You pick one.

“Hey Brain, write my expert statement”

3 versions of “I help [who] solve [problem]. I've done it for [n] years.” You lock one.

Win to post in Circle: “My one problem: I help [who] solve [problem]. I've done it for [n] years.”

2

Day 2 · Capture it

Turn your method into a one-page playbook.

“Hey Brain, walk me through my method”

It takes you through one real client (no names): what you do first, then what, how you know it's done.

“Hey Brain, turn my method into a checklist”

A one-page playbook: 5–9 **steps**, the **questions** you ask, the **red flags** you spot, the **rules** you use to decide.

“Hey Brain, what am I leaving out?”

It finds your “it depends” moments and asks how you decide. Your judgment calls get added.

“Hey Brain, name my method”

5 name options and one pick.

Win to post in Circle: “My method has [n] steps. It's called [name].”

3

Day 3 · Build your AI tool

Load it into your MyGentic brain. No code.

“Hey Brain, set up my expert brain”

Your playbook as a clean **Knowledge** document, a name for your tool, and where to upload it in Brain Builder.

“Hey Brain, learn how I talk”

Paste 3 things you wrote (emails, posts, notes; no names). You get **voice notes** to paste into your brain's instructions.

“Hey Brain, set my rules”

Who it serves, what it **never** does (no guarantees, no made-up numbers), and when it hands the client to you.

“Hey Brain, answer as me: [client question]”

An answer in your voice, from your playbook, with your next step. It says so when the playbook doesn't cover it.

Win to post in Circle: “Meet [tool name]. I asked it: [question]. Here's its first answer.” + screenshot (no client names)

4

Day 4 • Test it

Same real client question: a generic AI answer vs your brain's.

“Hey Brain, give me my test questions”

5–10 real questions your clients ask: everyday, tricky, and one out of scope.

“Hey Brain, answer as me: [client question]”

Ask the same question in any general AI chat first, then here. Put the two answers side by side.

“Hey Brain, compare these two answers”

Both scored on four tests: **specific** · **sounds like you** · **next step** · **safe**. Plus “what only you would say”.

“Hey Brain, fix what you got wrong”

Say what's wrong in plain words. It drafts the playbook update; you add it to Knowledge and ask again.

Win to post in Circle: Your side-by-side (names removed) + “What only my AI said: ...”

5

Day 5 • Package & price it

Service first, then product.

“Hey Brain, package my service”

A service with your AI tool inside: who, outcome, how long, what's included, where the tool helps.

“Hey Brain, help me price it”

A worksheet built from **your** numbers. It never invents a price; **you** pick a test price.

“Hey Brain, map my product path”

Now: you + your tool · **Next:** between sessions · **Later:** self-serve.

“Hey Brain, write my offer message”

A short message to 3 people who know your work. **You send it yourself.**

Win to post in Circle: “My first offer: [service] for [who]. [Tool name] is inside it.”

After Day 5: Brain to Business. The 4-month program to build your AI tool for real, with clients. **\$997** · [sales page link]

WHAT YOUR BRAIN NEVER DOES

Invent numbers, results, testimonials, prices or quotes (anything you haven't given it stays in [brackets]) · keep client names (remove them first) · send messages for you (it drafts; you send) · ask you to code.
